

架构治理与健康检查

Architecture identity: sample-api

Architecture version: 1.0.0

Contents

ARCH-001 Context and goals

ARCH-010 Boundaries and contracts

ARCH-020 Deployment and testing

Requirements

Provide deterministic health JSON.

Constraints

One stateless service.

Non-goals

No database or authentication in this health-only task.

Assumptions

Internal gateway controls access.

Risks

Verify gateway before public exposure.

External dependencies

Node.js

Rejected alternatives

Database-backed health checks are unnecessary.

Decisions

Decision DEC-001 [accepted]: A single service owns health.

ARCH-001 Context and goals

[illegible]

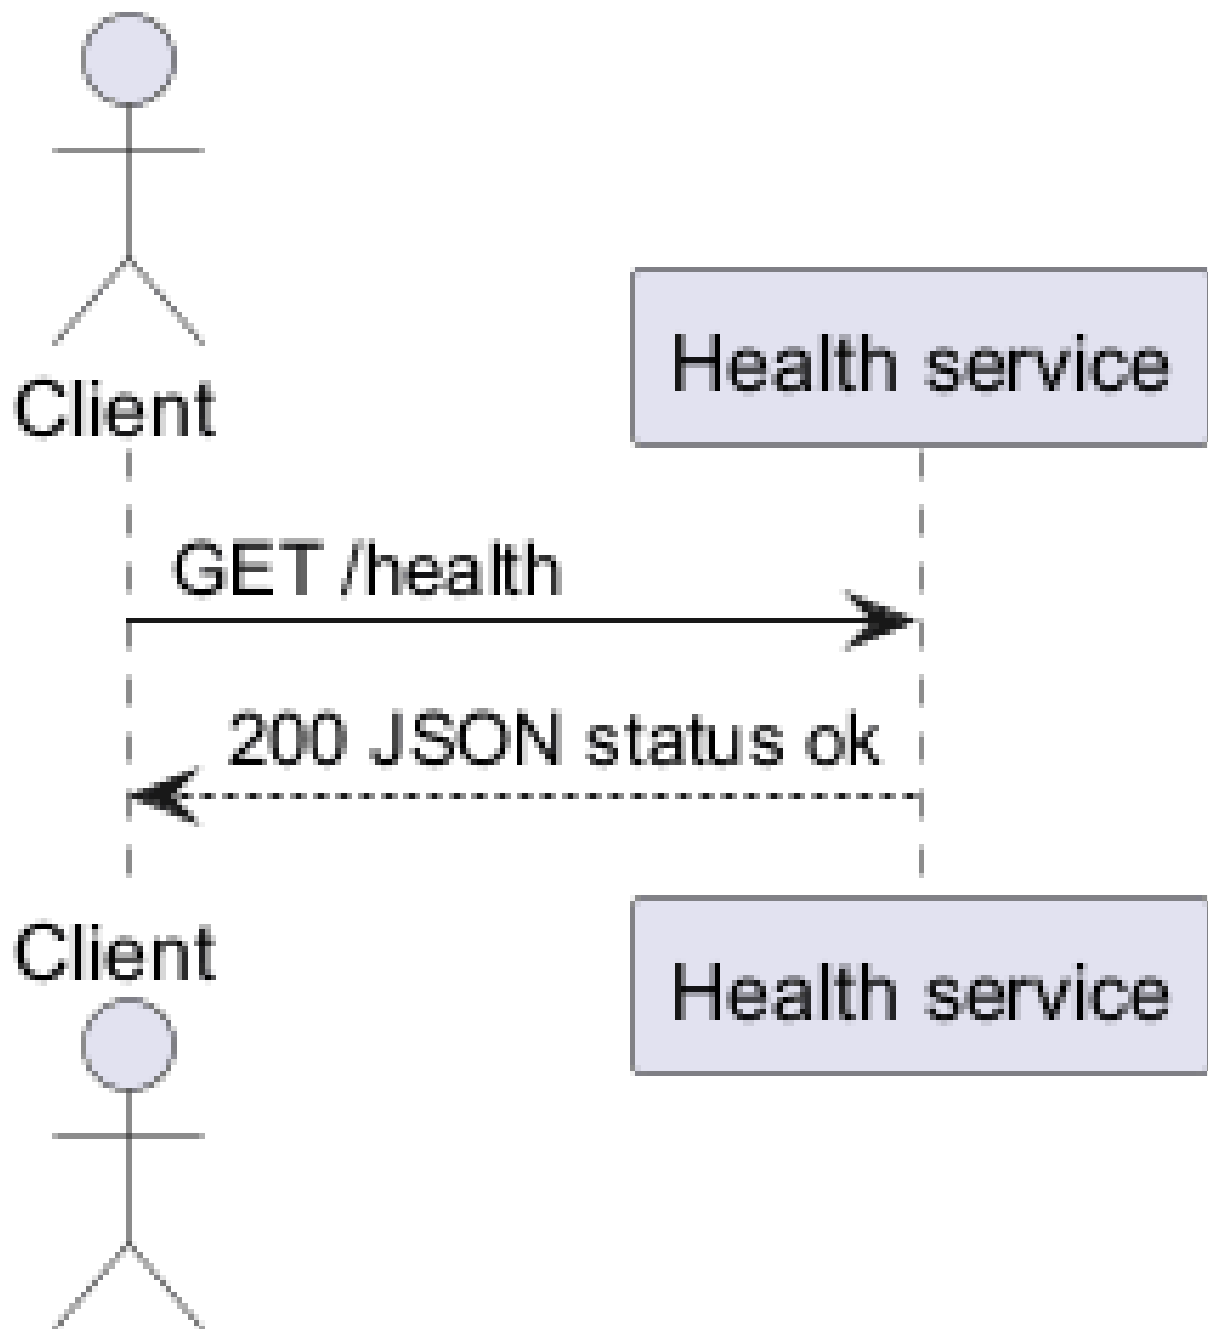

[illegible]

Rationale: Small stateless component meets accepted requirements.

Trade-offs: No dependency aggregation.

ARCH-010 Boundaries and contracts

AS-IS: empty app. TARGET: GET /health returns HTTP 200 with application/json and status ok. KNOWN
DEVIATION: implementation pending. Errors use HTTP 500 without retries.

ARCH-020 Deployment and testing

One Node.js service behind gateway. Rollback to previous release. Local and CI use the same validation contract.
