

CLI health architecture

Architecture identity: health-fixture

Architecture version: 2.0.0

Contents

ARCH-001 CLI scope

ARCH-010 Local contract

ARCH-020 Validation

Requirements

Provide deterministic local health JSON.

Constraints

A CLI tool, no server or GUI.

Non-goals

No database, middleware or gateway.

External dependencies

Node.js

Rejected alternatives

HTTP service excluded from this fixture.

Decisions

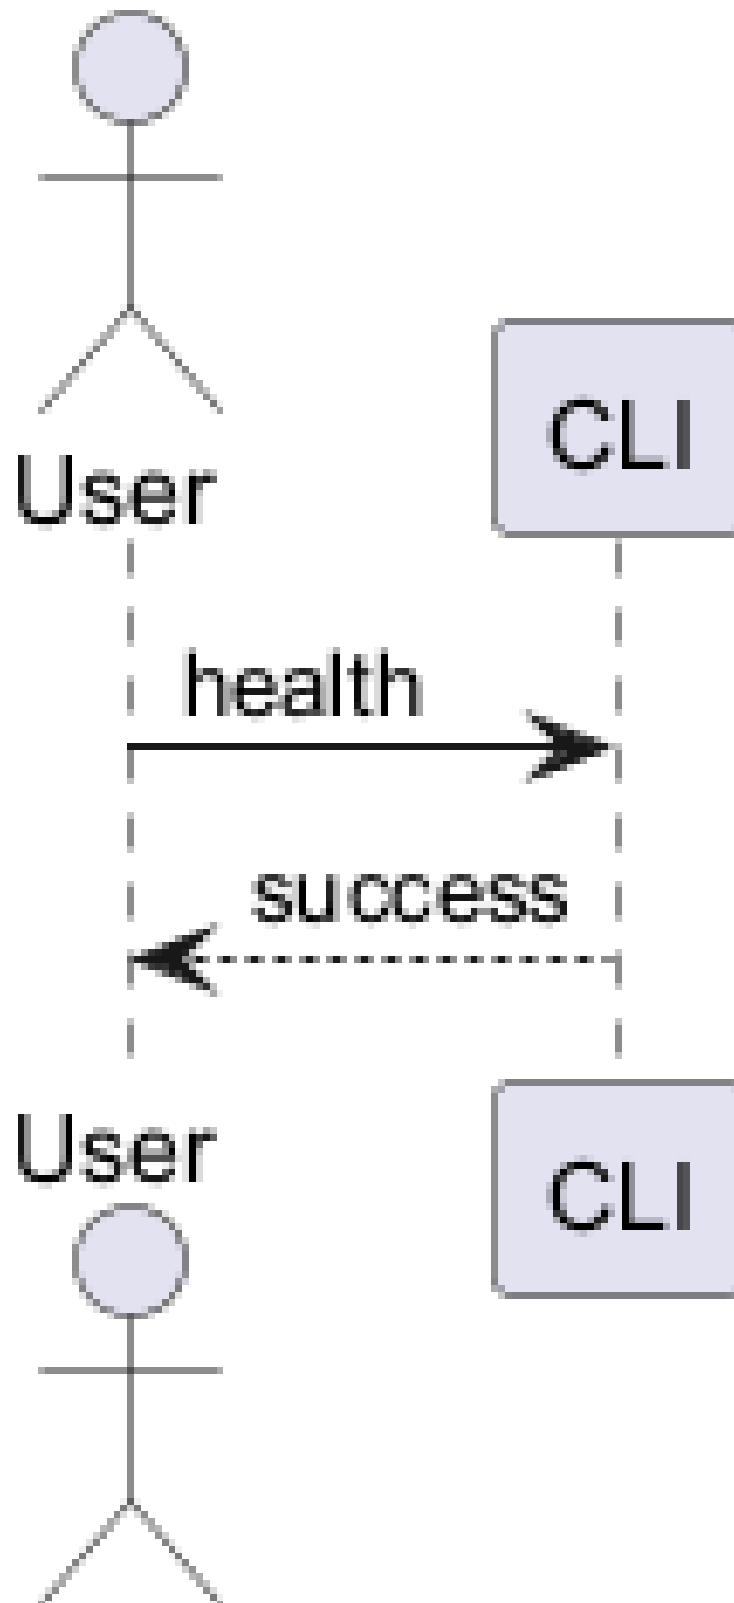

Decision DEC-001 [accepted]: Node CLI without framework

ARCH-001 CLI scope

A user invokes the local CLI health command and receives deterministic JSON. No HTTP server, GUI, database or gateway.

ARCH-010 Local contract

The command returns status ok on success. Failures return a nonzero process code with a diagnostic. No network API is introduced.

ARCH-020 Validation

Node tests validate the local command. The same validation contract runs locally and in CI.
